

AUXFORMS

A Smart Digital Platform for Workflow Automation

AUXFORMS is a smart, scalable platform that eliminates paper-based forms, spreadsheets, and manual approvals by replacing them with structured, secure, and fully digital workflows.

It enables organizations to capture data efficiently, automate processes, and improve operational visibility—all from a single platform.

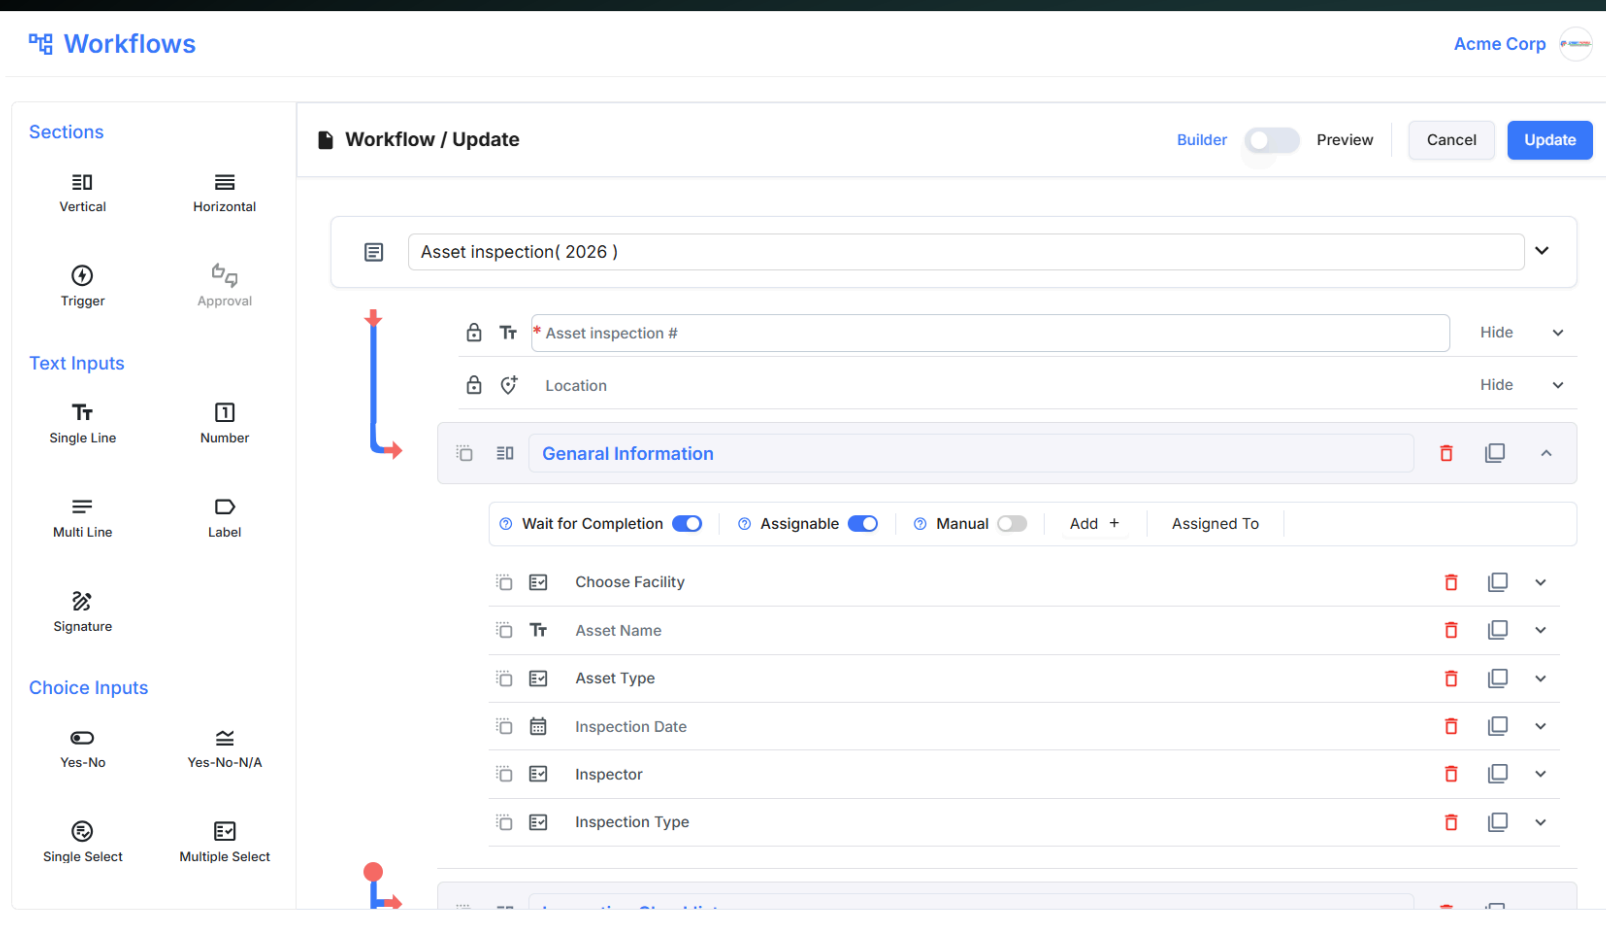

WHY AUXFORMS?

- Digitize and standardize data collection across the organization
- Reduce manual effort and approval delays
- Improve accuracy, traceability, and compliance
- Enable faster decision-making with real-time data

WORKFLOW & TASK AUTOMATION

Streamline Processes from Start to Finish

- Create **dynamic digital forms** to capture structured, validated data effortlessly
- Automatically store and organize submitted data for **tracking, analytics, and reporting**
- Generate tasks based on **predefined workflows**, ensuring the right sequence of execution
- Assign tasks to **specific users or teams** to establish clear ownership and accountability
- Automate task creation and scheduling based on **business rules and timelines**
- Enable **real-time notifications** to keep users informed of task progress and approvals

DYNAMIC FORM(UI) BUILDER

Build Business Forms Faster, Smarter, and with Zero Complexity

It enables organizations to capture data efficiently, automate processes, and improve operational visibility—all from a single platform.

- Quickly convert database tables into ready-to-use digital forms
- Ensure consistent data capture with built-in validation
- Reduce development effort and dependency on technical teams
- Adapt forms easily as business requirements evolve

KEY CAPABILITIES

- 01 Trigger actions and workflows **across multiple forms**
- 02 Enable **automated email notifications** for submissions, approvals, and status changes
- 03 Generate forms directly from **selected database tables**
- 04 Configure **role-based and table-based user access** for enhanced security
- 05 Activate notifications for all critical form actions and updates

DATA-OBJECT-DRIVEN FORM(UI) AUTOMATION (AWS, AZURE, & GCS)

Design and automate forms using **AWS, Azure, GCS data objects** instead of traditional database tables, or any **Traditional database tables**, enabling greater flexibility while retaining a simple, structured approach to workflow automation.

- Generate forms based on **AWS, Azure, GCS data objects** that define the data structure
- Configure form behavior and workflows directly from these data objects
- Maintain consistent data definitions across forms and processes
- Control user access based on data object configuration or role permissions
- Enable notifications and actions tied to data object updates
- Integrate with external systems using the same data object definitions

BUSINESS VALUE

- 01** Cloud-native scalability without infrastructure overhead
- 02** Faster deployment using managed AWS and Azure services
- 03** Improved resilience and availability through distributed data objects
- 04** Reduced operational complexity with serverless automation
- 05** Future-ready architecture that supports hybrid and multi-cloud strategies

| User Name | Email | # | Date of Birth | # | Role | Address | Contry |
|-----------|-----------------|------------|---------------|---------|------|---|----------------|
| Jason | Jason@gmail.com | 12-05-1999 | | Manager | | 45/2, MG Road T. Nagar Chennai, | India |
| Rohan | rohan@gmail.com | 20-02-2000 | | Admin | | 221B Baker Street Marylebone London | United Kingdom |

The screenshot shows a workflow builder interface for 'User Register Form'. The main workspace displays a form structure with the following fields:

- Enter Title (Text Input)
- Location (Text Input)
- User Information (Section Header)
- User Name (Text Input)
- Email (Text Input)
- Date of Birth (Text Input)
- Role (Text Input)
- Address (Text Input)
- Contry (Text Input)

The interface includes a left sidebar with 'Sections' (Vertical, Horizontal), 'Text Inputs' (Single Line, Number, Multi Line, Label, Signature), and 'Choice Inputs' (Yes-No, Yes-No-N/A, Single Select, Multiple Select). The top right has 'Builder', 'Preview', 'Cancel', and 'Update' buttons.
